

Installation Instructions - Gravity Vents

1. Select a location on a wall that is clear of wiring, plumbing and other obstructions
2. Use the neck of the vent as a template to mark a round hole
3. Cut hole with appropriate tool to suit material
4. Screw the vent in using the 4 screws provided - ensuring that louvers fall downwards
5. Attach the ducting to the neck of the vent using worm clamps and/or duct tape

Note: The steel mesh may be removed if required. This is recommended in dryer venting installations where the mesh may clog with lint
