

# Backdraft Butterfly Dampers

## Instructions

- + Ensure that the damper is placed in the correct direction. The semi circular dampers should open towards the fan if it is drawing air in – and away from the fan if it is blowing air out
- + Insert the ducting over both ends of the damper sleeve
- + Secure ducting to damper sleeve with steel worm clamps and/or duct tape

**Note:** For the best fit we recommend using both worm clamps and duct tape. Duct tape on its own can lose adhesion over time
