

Metal Eave Vents

Alpine has 2 styles of metal eave vents – a louvered style with mesh (in 2 colours) and a new contemporary style constructed from 0.9mm steel. Air draws up through the eave allowing for hot air to be extracted in hotter months and moist air in cooler months. These vents are ideal for compliance under NCC 2022 10.8.3 and as an air intake for rotary vents and low profile roof vents.

- + Powder coated galvanised steel construction
- + Steel mesh protects from insects and rodents
- + Ideal for roof venting compliance under NCC 2022 10.8.3
- + Compliant with the fire rating requirements of AS3959-2009 up to BAL-40
- + Ideal for use with rotary roof vents for air intake
- + Cools in summer and prevents dampness and mould in winter
- + Screw in – screws not supplied
