

# Sub Floor Vent Kits

SFK200

The Alpine Ventilation range of sub floor vent kits is an easy and low cost DIY way to remove moisture from under your house. There is a 150mm and a higher capacity 200mm version. Each consists of an axial fan with power cord, aluminium exterior vent with neck adapter, ducting, timer and clamps, duct tape and hanging tape – everything that should be required for most installations. The kits can be extended with the use of Y pieces and additional lengths of ducting. The fan can draw in dry air from outside and force out the moist air through other vents – or it can be reversed to extract the moist air and have dry air from outside replace it via other vents in the sub floor.

## Contents include:

- + Aluminium louvre vent with mesh and neck adapter
- + Flexible ducting (2m x 150mm or 3m x 200mm)
- + Axial fan with plug (150mm – 330m<sup>3</sup>/h or 200mm – 571m<sup>3</sup>/h)
- + Analog timer
- + 30m x 48mm duct tape
- + Duct hanging tape
- + 3 x steel clamps
