

Steel Wall Vents

Alpine Ventilation has developed a new range of galvanised steel wall vents for brick and weatherboard homes. Made from premium z275 grade galvanised steel or stainless steel, these will stand the test of time in Australian elements. Some are hooded and some contain mesh for BAL-40 compliance and are ideal for bushfire zones. They are suitable for both residential and commercial applications – and are ideal to vent out the sub floor and walls to reduce the likelihood of issues with damp and mould.

- + z275 grade galvanised steel or stainless steel
- + Variety of sizes
- + Options available for brick and timber walls
- + Some versions with mesh for BAL-40 compliance
- + Ideal to prevent dampness and mould
