

Metal Eave Vents

Alpine has 2 styles of metal eave vents – a louvered steel style with mesh (in 2 colours) and a new contemporary style constructed from 1.0mm aluminium. Air draws up through the eave allowing for hot air to be extracted in hotter months and moist air in cooler months. These vents are ideal for compliance under NCC 2022 10.8.3 and as an air intake for rotary vents and low profile roof vents.
